

SEFFILLER®

## WHAT IS SEFFILLER®

**SEFFILLER®** is a very delicate medical treatment that aims to regenerate the skin, subcutaneous tissue and mucous membranes by using the most natural, compatible and safe substance that can exist, namely your fat tissue and the stromal vascular component (SVF) and mesenchymal stem cells (ADSCs) contained in it. This treatment is able to improve the appearance of your skin and the nourishment of the subcutaneous tissue and mucous membranes thanks to the regenerative action of the grafted cells.

This technique is used in particular in the facial region to improve the appearance and tone of the skin and mucous membranes, and can also be used in other parts of the body with the same objective.

REGENERATE YOUR TISSUES  
WITH YOUR  
PROGENITOR CELLS

## SEFFILLER® CAN BE ASSOCIATED WITH OTHER TREATMENTS

**SEFFILLER®** treats tissues and skin in a natural way through regeneration and microcirculation improvement; it can be easily associated with other medical procedures such as fillers, traction threads, needling, laser, peeling, botulinum toxin, etc., improving their effect.

BEAUTY

HEALTH

HARMONY

## SEFFILLER® MUST BE REPEATED

This regenerative treatment involves grafting of cells that follow their own life cycle, therefore in order to maintain, prolong and strengthen the regenerative effect, you will be advised to repeat treatment after 12, 6 or 4 months depending of your conditions.

## SEFFILLER® IS SAFE

**SEFFILLER®** involves the grafting of your own tissue containing adipocytes, the vascular stromal fraction and mesenchymal stem cells, therefore it is **SAFE**, **NATURAL** and **EFFECTIVE**.

## HOW THE SEFFILLER® TREATMENT WORKS

**SEFFILLER®** involves at first a modest extraction of adipose tissue from an area of the body, through a small cannula connected to a syringe. This tissue is then engrafted – by means of injections – in the face (or other areas of the body) to favour the natural tissue regeneration. This treatment can be performed under local anesthesia.
