

SEFFILLER®

The new age of
AUTOLOGOUS REGENERATIVE THERAPY (ART)
IN AESTHETIC MEDICINE

EASY - SAFE - STANDARDIZED - EFFECTIVE

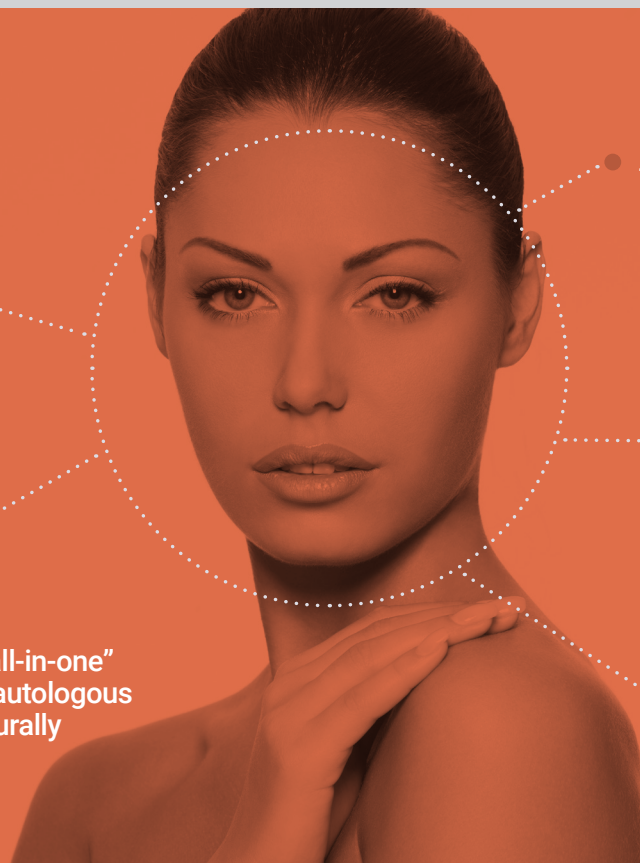

SEFFILLER® is designed for physicians who want to perform advanced aesthetic therapies

SEFFILLER® does not require any equipment, other than the kit itself, for harvesting, preparation and grafting

The tissue obtained with SEFFILLER® needs minimal manipulation and is prepared in a closed sterile system

SEFFILLER® is a disposable "all-in-one" kit for guided harvesting and autologous grafting of adipose tissue naturally rich in stromal fraction (SVF) containing Adipose Derived Stem Cells (ADSCs)

With SEFFILLER® the harvesting procedure is **guided** and hence simple, safe and standardized

The guide makes the harvesting procedure of adipose tissue easy, safe and standardized, in the correct subcutaneous plane and at a safe depth

The special syringe with self-blocking plunger allows a simple, safe and effective tissue suction

The special harvesting cannula selects small cellular vascular clusters that need minimal manipulation for grafting in order to perform the advanced aesthetic therapy

SEFFILLER®

THE DISPOSABLE GUIDED SYSTEM

FOR PHYSICIANS IN AESTHETIC MEDICINE

The new age of
**AUTOLOGOUS REGENERATIVE
THERAPY (ART)**
IN AESTHETIC MEDICINE

SEFFILLER® makes it simple, easy and safe to harvest and prepare the adipose tissue naturally rich in stromal vascular tissue (SVF) and mesenchymal stem cells (ADSCs)
