SIMPLE

FOR THE OPERATOR
the **patented guide** simplifies the procedure

FOR THE TREATMENT FACILITY
ART is an **outpatient** treatment

FROM A LEGAL POINT OF VIEW
it is a homologous autologous graft of **adipose tissue**
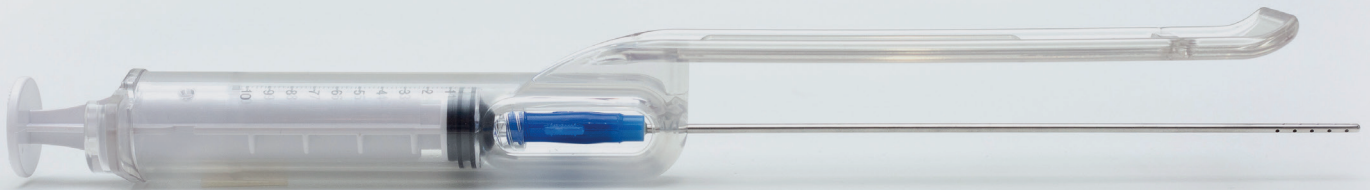

Bring the **outpatient** Autologous Regenerative Therapy (ART) into your practice! In addition to the improvement of the tissue macro environment through **growth factors** (GF) with an improvement in micro circulation, and through **fibroblasts** with collagen production, a stimulation of regrowth is also obtained through a boost at the bulbar level thanks to **adipose-derived stem cells** (ADSCs). This extraordinary new method integrates perfectly with other techniques that the Aesthetic Doctor / Dermatologist / Trichologist can make available to their patients, to fight a multifactorial pathology - such as alopecia - in an integrated way. The complementarity of tissue regeneration with already known treatments makes ART an essential ally against hair loss, for a true regenerative medicine which acts from the inside, promoting regrowth.
